**LEAP** NETWORKS

Instructions for connecting to the US Bankruptcy Court's public wireless hotspot

1. Because this wireless network uses the newest security standards for encryption, you must connect to it with Windows XP Service Pack 2.
   note: Other operating systems or wireless clients that support WPA-PSK (WiFi Protected Access with Pre-Shared Key) may also work, but are not supported by this document.

2. Right click the "wireless network connection" icon in the system tray (bottom left). Then choose "View Available Wireless Networks". From the list choose USBCPublic and click "Connect".

3. The following prompt will appear asking for the network key. Please type in: Nashville as the network key and confirm it. Then click Connect.
   note: The word Nashville is case sensitive.

Wireless Network Connection

The network 'USBCPublic' requires a network key (also called a WEP key or WPA key). A network key helps prevent unknown intruders from connecting to this network.

Type the key, and then click Connect.

Network key: [   ]

Confirm network key: [   ]

[Connect] [Cancel]

It should take several seconds to connect the first time. After that, the laptop should be on the Internet. In the future, when the laptop comes within range of this wireless hotspot, it will connect automatically and continue to use the correct encryption "network key" without asking for it again.
